Exegy Partners with Solace Systems to Provide Hardware-Accelerated Market Data

St. Louis and Ottawa – 11 May 2010 — Exegy, the hardware-accelerated market data appliance company, and Solace Systems, the leading provider of hardware-based middleware, announced today an alliance for market data collection and distribution. Large trading groups are increasingly using hardware-based systems to cope with the ever increasing volumes of market data, and traders need to collect and distribute data with extremely low, consistent latency. The Exegy Total Connect, Exegy's low-latency market data appliance, will work with the Solace Message Router to simplify the enterprise-wide distribution of market data.

The integration allows a single 2U Exegy Total Connect appliance to consume all available market data feeds and simultaneously distribute relevant data to hundreds of client applications through the Solace Message Router. Software-based solutions typically have a much larger footprint in the data center and suffer from latency jitter under load. The consolidation, out-of-the-box behavior and linear scalability associated with using appliances for both feed handling and distribution of market data reduces the cost and complexity of the system.

"Fast, predictable market data is the cornerstone of successful trading operations", said Shawn McAllister, Chief Technology Officer at Solace Systems, "The combination of the Exegy and Solace appliances provides a unique hardware-based solution for accelerating access to market data, whether in a co-location facility, or across the enterprise."

Scott Parsons, Exegy's Chief Scientist and Chief Architect said, "Our clients want to extend the ultra low-latency performance and space savings of our unique market data appliance to more and more users. Those same customers recognize the inherent advantages of hardware-based systems, so working with Solace is an obvious development. This powerful combination satisfies a growing need to deliver ultra low latency market data deeper into the enterprise."

About Solace Systems

Solace Systems (www.solacesystems.com) is the leading provider of middleware appliances. Middleware, which has historically been software-based, enables disparate enterprise applications and information systems to share information. By performing this function in purpose-built hardware, Solace products accelerate information flow while reducing the cost and complexity of IT infrastructure. Solace products have been successfully deployed by global leaders in many segments of the financial services market (buy side firms, investment banks, exchanges, and financial information providers) and other markets such as government, telecommunications, transportation and logistics, and utility computing.

About Exegy

Exegy provides ultra-high performance hardware-accelerated computing appliances (www.exegy.com/tickerplant) that efficiently process and enrich market data for the world's leading financial organizations. Exegy's unique market data products respond to financial organizations' growing demands for low latency, reduced cost of ownership, and flexibility. Exegy's products are compatible with leading operating systems and network interconnects. For more information, please visit www.exegy.com.
