

Exegy Ticker Plant

» Top Ten Benefits

- only 2U in size
- over 60 feed handlers
- more connections

There are many reasons leading international banks are relying on the Exegy Ticker Plant to process their market data at ultra-low latency. Here are their top 10.

1. Low latency

If your trading applications are colocated at the exchange matching engines and you are not seeing bids and offers first, your competitor has stolen the colocation advantage from you. The Exegy Ticker Plant enables you to see bids and offers first.

2. Consistent low latency

Finely tuned trading applications are not well served by ticker plants that cannot maintain their lowest latency during periods of high volume. The Exegy Ticker Plant has proven to maintain the lowest latency, even during periods of fluctuating, extreme volumes.

3. Order book

Your trading application has access to an order book, maintained in the ticker plant appliance, with the full depth of the colocated markets data sorted in fine detail. The Exegy Ticker Plant Order Book does not add additional processing and maintains the latency advantage.

4. Virtual Order Book

The Exegy Ticker Plant maintains an order book for all markets. Your colocated trading application has the fastest depth of book view of the colocated market and the fastest depth of book view available at this specific colocated site of remote markets.

5. Multi-asset class order book

The ticker plant ingests feeds from equity, options and futures markets simultaneously and maintains its unique Virtual Order Book with full depth of book views for your trading application. Think oil stocks, options on oil stocks, oil futures, oil ETFs — feeding your trading application with the lowest latency market data — all in a single appliance.

6. Basket/Index Calculation Engine	Your trading application can specify up to 1,000 baskets/indexes with each containing thousands of components for the ticker plant to calculate as market data streams through the appliance with no added latency. The Exegy Ticker Plant Basket Calculation Engine requires no additional processing and maintains the latency advantage.
7. Excess processing power	Use the Exegy Ticker Plant to host all or a portion of your trading application and/or third party execution management systems. The Exegy Ticker Plant provides all of the above features and has plenty of processing power for some trading applications. In addition, Exegy Professional Services can help you to hardware accelerate portions of your trading applications in the appliance.
8. Ease of deployment	The Exegy Ticker Plant typically ships as a 2U appliance. You may specify a physical connectivity option of 10 Gigabit Ethernet or Infiniband.
9. The Best Service Program	<p>A fixed fee per month for each appliance for a two-year term.</p> <p>Service includes:</p> <ul style="list-style-type: none"> • All software, firmware and hardware upgrades during the life of the term. If Exegy builds a better feature or better appliance, Exegy provides it free of charge. • All market exchange feeds that Exegy maintains today and any new feeds Exegy develops during the life of the term. • All maintenance and service during the life of the term. • Exegy's 24/7 remote managed service of the ticker plant, including handling updates to feeds and monitoring performance.
10. A Great Product Road Map	The Exegy Ticker Plant road map includes many new features that address customer needs for more functionality and support for a broader distribution of low-latency market data.
